

The Wonder Book of Chemistry

Translated from the French by Florence Constable Bicknell. A wondrous introduction to the world of chemistry, designed specifically for younger readers with the intention of arousing their interest in science. Using everyday objects found around the house or in the local store, this book is set as a storyline in which an Uncle Paul teaches his two nephews the secrets behind building an artificial volcano; how to set metals on fire; the flammable properties of water; how to make a fire hotter; how to make soap bubbles rise; how to make invisible ink; the science behind effervescent wines, ciders, and beer; how plants feed on carbon, water, and air and much, much more. From the translators preface: The personal, biographical interest of the book is not to be overlooked. The boys Jules and Emile are the authors own children; faithfully portrayed even to the names they bear. In his captivating fashion the man of vast learning makes himself at once teacher and comrade to his young hearers, and we learn that his chemistry lessons especially had a great success. With apparatus of his own devising and of the simplest kind he could perform a host of elementary experiments, the apparatus as a rule consisting of the most ordinary materials, such as a common flask or bottle, an old mustard-pot, a tumbler, a goose-quill or a pipe-stem. A series of astonishing phenomena amazed their wondering eyes. He made them see, touch, taste, handle, and smell, and always the hand assisted the word, always the example accompanied the precept, for no one more fully valued the profound maxim, so neglected and misunderstood, that to see is to know. Though living creatures necessarily claimed the naturalists first affections, he nonetheless animates even the simple elementary bodies, celebrating the marvelous activities of the air, the violence of chlorine, the metamorphoses of carbon, the miraculous weddings of

phosphorus, and the splendors which accompany the birth of a drop of water.
CONTENTS Translators Preface Chapter I: Introduction Chapter II: Mixing and Combining Chapter III: The Slice of Toast Chapter IV: Simple Substances Chapter V: Compound Substances Chapter VI: Experiments with the Breath Chapter VII: Experiments with Air Chapter VIII: Further Experiments with Air Chapter IX: The Two Sparrows Chapter X: Burning Phosphorus Chapter XI: Burning Metals Chapter XII: Salts Chapter XIII: A Talk on Tools Chapter XIV: Oxygen Chapter XV: Air and Combustion Chapter XVI: Rust Chapter XVII: At the Blacksmiths Chapter XVIII: Hydrogen Chapter XIX: A Drop of Water Chapter XX: A Piece of Chalk Chapter XXI: Carbonic-Acid Gas Chapter XXII: Different Kinds of Water Chapter XXIII: Plants at Work Chapter XXIV: Sulphur Chapter XXV: Chlorin Chapter XXVI: Nitrogen Compounds Note: This is not a scan copy but has been completely reset.

From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, to the cellular phone you hold to your ear—sometimes for hours each day—exposure to EMR is growing and becoming a serious health threat. Read more... Genetics of Cancer Author: Dr. Magdy Aly Genetics of Cancer Genes are the heart and brain of our development. They dictate the color of our eyes, our complexion and most certainly our susceptibility to develop certain illnesses, among which, Cancer is one that we are most concerned about. Is there a way to determine if we are predisposed and carry a higher risk of developing certain cancers? Can we predict at what age we may develop an illness? And if so, what can, or rather, shall we do about it. Read more...
