

# Cryopreservation of Plant Germplasm I (Biotechnology in Agriculture and Forestry)

The germ plasm of numerous plant species, especially those of forest trees, some agricultural crops, and medicinal plants, is endangered and threatened with extinction. This depletion of germplasm pools and the shrinkage of naturally occurring genetic resources have caused international concern. Conventionally, the germplasm of plants is conserved through seeds, tubers, roots, corms, rhizomes, bulbs, cuttings, etc. However, the germ plasm of a number of trees and plantation crops (such as coconut, cocoa, coffee, oil palm, rubber, mango, horse chestnut, etc. ) cannot be preserved since their seed are short-lived (recalcitrant). Likewise, germplasm of vegetatively propagated crops (such as potato and cassava) cannot be stored on a long term basis and has to be grown and multiplied periodically in nurseries and fields. The plants are thus exposed to unpredictable weather conditions and diseases, with the result that instances are known where entire genetic stocks are lost. Therefore, unconventional methods are being developed for the storage and international exchange of germplasm. For this purpose in vitro cultures have been employed, but they can only enable short-to medium term preservation; moreover, cell cultures upon repeated subculture undergo genetic erosion. In view of the recent developments in the in vitro induction of genetic variability through somaclonal variation, somatic hybridization, recombinant DNA technology, etc. , new methods need to be employed for the storage of desirable cultures. In this regard freeze preservation of cells in liquid nitrogen (-196 0q, like that of semen, enables long-term storage, theoretically, for an indefinite period of time.

ElRehim Sayed Aly Prof. of Cytogenetics The Hidden Dangers of Cell Phone Radiation Author: Dr. Magdy Aly The  
Hidden Dangers of Cell Phone Radiation Every day, we're swimming in a sea of electromagnetic radiation (EMR)  
produced by electrical appliances, power lines, wiring in buildings, and a slew of other technologies that are part of  
modern life. From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, to the  
cellular phone you hold to your ear—sometimes for hours each day—exposure to EMR is growing and becoming a  
serious health threat. Read more... Genetics of Cancer Author: Dr. Magdy Aly Genetics of Cancer Genes are the heart  
and brain of our development. They dictate the color of our eyes, our complexion and most certainly our susceptibility  
to develop certain illnesses, among which, Cancer is one that we are most concerned about. Is there a way to determine  
if we are predisposed and carry a higher risk of developing certain cancers? Can we predict at what age we may develop  
an illness? And if so, what can, or rather, shall we do about it. Read more... Main Menu Home PROFILE
