

The Moon

Maryam Sachs light and witty text traces the history of our approaches to the moon, from the folkloric to the scientific. It describes the planets habits, lists moon gods and goddesses, and covers myths and superstitions, as well as the symbolism and the gender of the moon, lunar calendars, astrology, and moon magic. Throughout time, the moon has spoken to poets, philosophers, and astrologers, and its ever-changing image has been captured by artists from all cultures and periods. Illustrated with Renaissance frescoes, Tlingit masks, Chinese architecture, nature photography, and icons of popular culture, *The Moon* includes Persian court poetry, Shakespearean verse, and provocative words of wisdom from Native American tradition. Elegant and evocative, this volume of lore and legend will be treasured by all readers.

From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, to the cellular phone you hold to your ear—sometimes for hours each day—exposure to EMR is growing and becoming a serious health threat. Read more... Genetics of Cancer Author: Dr. Magdy Aly Genetics of Cancer Genes are the heart and brain of our development. They dictate the color of our eyes, our complexion and most certainly our susceptibility to develop certain illnesses, among which, Cancer is one that we are most concerned about. Is there a way to determine if we are predisposed and carry a higher risk of developing certain cancers? Can we predict at what age we may develop an illness? And if so, what can, or rather, shall we do about it. Read more...
