

Ecology and Evolutionary Aspects of Insecticide Resistance (Biotechnology Intelligence Unit)

This comprehensive book addresses the ecological and evolutionary forces that shape the response of insect populations to attempted control by chemical insecticides. Through broad coverage of the literature, the author investigates phenotypic basis of the change from susceptibility to resistance at genetic, molecular, and biochemical levels, and then relates the results to the most effective strategies for managing resistance. Within this framework, this book critically analyzes areas of current research, and identifies areas of future research. Dr. McKenzie emphasizes the necessity of a pure research approach to understanding the evolution of resistance and he asserts that resistance systems are ideal models for tackling questions of general ecological and evolutionary interest.

Written primarily for an audience with a general ecological and evolutionary background Provides ample suggestions for areas of future research Includes examples of resistance in insects, arthropods, nematodes, weeds, and vertebrates

From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, to the cellular phone you hold to your ear—sometimes for hours each day—exposure to EMR is growing and becoming a serious health threat. Read more... Genetics of Cancer Author: Dr. Magdy Aly Genetics of Cancer Genes are the heart and brain of our development. They dictate the color of our eyes, our complexion and most certainly our susceptibility to develop certain illnesses, among which, Cancer is one that we are most concerned about. Is there a way to determine if we are predisposed and carry a higher risk of developing certain cancers? Can we predict at what age we may develop an illness? And if so, what can, or rather, shall we do about it. Read more...
