

A treatise on nautical astronomy for the use of students

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1886 edition. Excerpt: ...June at 4h. 30m. p.m. it was found slow 2m. 49s. What is its daily rate? March 23, 8h. 30m. a.m. slow 5m. 13s. June 18, 4 30 p.m. slow 2 49 Gain in 87 days.. Daily rate Second Method, by equal altitudes of the same star on the same side of the meridian on different days.--We have already shown, p. 36, that the mean solar day is longer than the sidereal day by 3m. 5591s. of mean solar time; that is, the same star returns to the meridian 3m. 5591s. earlier each day than on the preceding one, and will, therefore, at the same place, return to any one altitude on the same side of the meridian earlier each day by that interval. Hence the difference between 3m. 55-91s. and the interval shown by a chronometer when a star has equal altitudes on the same side of the meridian on two consecutive days is the rate. In practice it is preferable to allow several days to elapse between the observations, and to select a star whose altitude is as great as possible and is changing quickly, and should therefore lie near the prime vertical. If the interval by the chronometer be less than 3m. 5591s. per day, it is gaining; but if the interval by chronometer be greater than that, it is losing. Ex. 309. On August 6th, at 10h. 7m. 46s., the altitude of Arcturus by an artificial horizon west of the meridian was 46 31. On August 29th, at 8h 34m. 505s. by the same chronometer, the star had the same altitude west with the same sextant. Required the rate of the chronometer. August 6, chronometer showed 10h. 7m. 46s. August 29, 8 34 505 Diff. in time for eq. alts. in 23 days = 1 32 55-5 1 day = 4 2-41 but true „, = 3 5591 Hence rate = 65 losing. If the error be required it may be calculated as by the first method....

From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, to the cellular phone you hold to your ear—sometimes for hours each day—exposure to EMR is growing and becoming a serious health threat. Read more... Genetics of Cancer Author: Dr. Magdy Aly Genetics of Cancer Genes are the heart and brain of our development. They dictate the color of our eyes, our complexion and most certainly our susceptibility to develop certain illnesses, among which, Cancer is one that we are most concerned about. Is there a way to determine if we are predisposed and carry a higher risk of developing certain cancers? Can we predict at what age we may develop an illness? And if so, what can, or rather, shall we do about it. Read more...
