

Advances in Lipid Research: v. 19

Advances in Lipid Research, Volume 19 is a seven-chapter text that covers the physical and biological aspects of lipid metabolism. The first chapter deals with the interactions between circulating lipids and lipid proteins and the arterial tissue matrix. The subsequent chapter discusses the apolipoprotein C metabolism, the roles of lecithin-cholesterol acyltransferase and cholesterol ester transfer protein in intravascular cholesterol transport. Other chapters explore the significance of bile acid biosynthesis for cholesterol homeostasis, the metabolism of phosphatidylserine, and gas chromatographic and mass spectrometry analysis of prostanoids. The last chapter considers the role of dietary fiber in health and disease. This book is of great value to lipid and enzyme chemists, biochemists, and researchers.

From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, to the cellular phone you hold to your ear—sometimes for hours each day—exposure to EMR is growing and becoming a serious health threat. Read more... Genetics of Cancer Author: Dr. Magdy Aly Genetics of Cancer Genes are the heart and brain of our development. They dictate the color of our eyes, our complexion and most certainly our susceptibility to develop certain illnesses, among which, Cancer is one that we are most concerned about. Is there a way to determine if we are predisposed and carry a higher risk of developing certain cancers? Can we predict at what age we may develop an illness? And if so, what can, or rather, shall we do about it. Read more...
