

Graphic Biochemistry: The Metabolism of Biomolecules v. 2

For the freshman/sophomore level of the introductory foods course at universities and community colleges. A leading seller for many years, this text has helped prepare thousands of students for careers as food scientists, foodservice managers, dietitians, and extension agents. Written for the beginning student, it provides clear, straightforward explanations of all of the basic principles of food preparation. It treats the chemistry involved in a way that is non-threatening and does not interfere with the flow of the text. The first part of the text covers basic principles, preparing the way for discussions in subsequent chapters. The new edition encompasses the latest information on technological advances in food preparation and processing. It also deals with the effect of shifting demographics on food trends, and the increasing body of knowledge available to the general populace about nutrition.

From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, to the cellular phone you hold to your ear—sometimes for hours each day—exposure to EMR is growing and becoming a serious health threat. Read more... Genetics of Cancer Author: Dr. Magdy Aly Genetics of Cancer Genes are the heart and brain of our development. They dictate the color of our eyes, our complexion and most certainly our susceptibility to develop certain illnesses, among which, Cancer is one that we are most concerned about. Is there a way to determine if we are predisposed and carry a higher risk of developing certain cancers? Can we predict at what age we may develop an illness? And if so, what can, or rather, shall we do about it. Read more...
