

Anthropology and Applied Biodiversity: Ecology as Affected by Human & Biodiversity Use

Anthropology, the discipline dealing with the human interference in nature and ecology is a burning issue, through out the globe. The present era of economics has surpassed the importance of ecology, due to this greedy social development the complete system of earth is in trouble. It has been a matter of concern for all the branches of science, humanities as well as law. The view and the ways of sustainable development instead of simply development has been suggested through this volume. Biodiversity is another important subject importance in discussions. The applied aspect of biodiversity has been dealt. Threat to biodiversity and conservation of biodiversity, through multifacial approach has been suggested. This book is an effort to bring together certain anthropological issue in amalgamation with the applied aspect of biodiversity. The book Anthropology and Applied Biodiversity comprises of sixteen chapters authored by renowned experts of their subject. This book can be useful for researchers, academicians and the scholar from the subject of botany, zoology, environmental sciences,developmental studies, particularly to those who think with difference.

From the dishwasher and microwave oven in the kitchen and the clock radio next to your bed, to the cellular phone you hold to your ear—sometimes for hours each day—exposure to EMR is growing and becoming a serious health threat. Read more... Genetics of Cancer Author: Dr. Magdy Aly Genetics of Cancer Genes are the heart and brain of our development. They dictate the color of our eyes, our complexion and most certainly our susceptibility to develop certain illnesses, among which, Cancer is one that we are most concerned about. Is there a way to determine

if we are predisposed and carry a higher risk of developing certain cancers? Can we predict at what age we may develop an illness? And if so, what can, or rather, shall we do about it. Read more...
